¿What is CORBA?

CORBA

Corba is an standard defined by Object Management Group (OMG), that allows many different components to work together even if its' software is written in different languages or its hosted in different machines. To sum up, it makes it easy to develop distributed applications in almost any kind of situation.

Characteristics

- Independence from the programming Language.
- Transparency from the distribution.
- Transparency from the localization.
- Integration from the existing software.
- Object activation, transparently from the client.
- High configuration capacity.
